Introduction

In July 2021 the EBA published Final GL on internal governance, that update the existing GL published in 2017. The update takes into account the amendments introduced by the CRD and IFD in relation to credit institutions' sound and effective governance arrangements

Introduction

In recent years, internal governance framework issues have received increasing attention of various international bodies. In fact, their main effort has been to correct the institution's weak or superficial internal governance practices as these faulty practices, while not a trigger for the financial crisis, were closely associated with it and were questionable.

According to the CRD IV, the EBA is mandated to further harmonise institutions' internal governance arrangements, processes and mechanisms within the EU. In this regard, in September 2011, the EBA published its Guidelines on internal governance (GL 44) with the objective of enhancing and consolidating supervisory expectations and improving the internal governance framework.

In 2017, the EBA updated GL 44 in order to further harmonising institutions' internal governance arrangements, processes and mechanisms across the EU. These GL put more emphasis on the duties and responsibilities of the management body in its supervisory function in risk oversight.

- In this context, following the consultation launched in December 2021, the EBA published **Final Guidelines on internal governance** under CRD that update the GL published in 2017 and take into account **gender diversity, money laundering, financing terrorist risk and the management of conflicts of interest**, including in the context of loans and other transactions with members of the management body and their related parties. In particular, this document covers the following aspects:
 - The role and composition of the management body and committees (risk, nomination and remuneration committees)
 - The governance framework.
 - The risk culture and business conduct.
 - The internal control framework and mechanisms.
 - The business continuity management.
 - The principles of proportionality and transparency.

This document includes an analysis of the requirements arising from the Final GL on internal governance.

Annex

Detail Role and composition of the management body and committees

These GL provide guidance on the duties and responsibilities of the management body, which should be define between the management function...

Management body and committees (1/4)

Role and responsibilities

- The management body must have the ultimate and overall responsibility for the institution and defines, oversees and is accountable for the implementation of the governance arrangements. These duties should be clearly defined distinguishing between executive members¹ and non-executive members². All members should be aware of the structure and responsibilities of the management body, and of the division of tasks between different functions of the management body and its committees.
- The responsibilities and duties of the management body should be described in a **written document** and duly approved by the management body and should include setting, approving and overseeing the implementation of, among others:
 - The **overall business strategy** and also the **overall risk strategies** (e.g. risk appetite, risk management framework)
 - An adequate, effective and independent **internal control framework**, ensuring compliance with applicable regulatory requirements in the context of the prevention of money laundering and terrorism financing.
 - The amounts, types and distribution of both internal capital and regulatory capital.
 - A remuneration policy in line with these GL.
 - Arrangements for ensuring the management body's individual and collective suitability assessment.
 - Arrangements aimed at ensuring the internal functioning of each committee.
 - · Adequate risk and corporate cultures.

Management function

Management**Solutions**

Making things happen

- The management body must oversee the process of disclosure and communications and its members should be informed about the overall activity, financial and risk situation of the institution. Moreover, it should monitor and periodically review any weakness identified on the implementation of processes, strategies, etc. Moreover, they should include a risk management framework that takes into account all relevant risk, including ESG risk factors and consider that the governance risks may drive prudential risks including credit risks.
- The management body should **engage actively in the business** of an institution and should **take decisions** on a sound and well- informed basis.
- Members of the management body in its management function.
- (2) Members of the management body in its supervisory function.

Role and composition of the management body and committees

... and the supervisory function. Moreover, the GL also provide guidance on the role of the chair of the management body as the main responsible for its effective overall functioning

	Management body and committees (2/4)
•	The management function of the management body involves, among others:
Management function	 Implementation of the strategies set by the management body and discuss regularly their implementation and appropriateness of those strategies. Constructively challenge and critically review propositions, explanations and information received, when exercising its judgement and taking decisions. Report and inform regularly the management body in its supervisory function. Identify one of its members who is responsible for the implementation of AMLD regulation.
•	 The management body should, among others:
Supervisory function	 Monitor and constructively challenge the strategy of the institution, oversee the management body in its management function, including monitoring and scrutinising its individual or collective performance. Periodically assess the effectiveness of its internal governance framework. Oversee the implementation of the risk culture, audit plan and institution's strategic objectives, as well as the the integrity of financial information and reporting. Ensure that heads of internal control functions are able to act independently to other internal bodies. Oversee the implementation and maintenance of a code of conduct or similar and effective policies to identify, manage and mitigate actual and potential conflicts of interest.
Chair of the management body	 The chair of the management body should lead the management body, should contribute to an efficient flow of information within the management body and between the management body and the committees thereof, should be responsible for its effective overall functioning, and should also encourage and promote open and critical discussion to ensure that dissenting views can be expressed.
·	 As a general principle, the chair should be a non-executive member. Therefore, the chair in the supervisory function and the CEO of an institution must not be the same person, unless justified by the institution and authorised by the CA.
agement Solutions	 The chair should, among other duties: Set the meeting agenda and ensure that strategic issues are discussed with priority. Contribute to ensure clear allocation of duties between members of the management body and the existence of an efficient flow of information between them.

Detail Role and composition of the management body and committees

Moreover, they also provide guidance on the committees in particular regarding their setting up, composition and processes

Management body and committees (3/4)

Committees

MSC

Management **Solutions**

Making things happen

- All institutions which are themselves significant¹ (at individual, sub-consolidated and consolidated level) must establish risk, nomination and remuneration committees to advise the management body in its supervisory function².
- Non-significant institutions, including when they are within the scope of prudential consolidation of an institution that is significant in a sub-consolidated or consolidated situation, are not obliged to establish those committees. Where no risk or nomination committee is established, those committees should be construed as applying to the management body in its supervisory function
- Institutions may establish other specialised committees (e.g. anti-money laundering/counter terrorist financing (AML/CTF), ethics, conduct and compliance committees).
- Regarding the composition of the committees:
 - All committees should be chaired by a **non-executive member** of the management body, should be composed of at least three members, and should not be composed of the same group of members that forms another committee.
 - Institutions should consider the occasional rotation of chairs and members of committees, taking into account the specific experience, knowledge and skills.
 - The risk and nomination committees should be composed of **non-executive members**.
 - Further, in G-SIIs and O-SIIs, the risk and nomination committees should include a majority of members who are independent and be chaired by an independent member.
 - In other significant institutions, determined by CAs or national law, the risk and nomination committees should include a sufficient number of members who are independent and the risk committee should be chaired, where possible, by an independent member.
 - In all institutions, the chair of the risk committee should be neither the chair of the management body nor the chair of any other committee.
- Likewise, the committees should regularly report to the management body in its supervisory function, have access to all relevant information and data necessary, etc.
- G-SIIs, and O-SIIs, and, as appropriate, other institutions determined by the CA. (2)

Non-significant institutions could establish only one committee which should exercise duties of both.

Detail Role and composition of the management body and committees

The GL also specify the duties of the risk, the audit and the combined committees

	Management body and committees (4/4)
Risk committee	 Among other tasks, this committee should: Advise and support on the monitoring of the institution's overall actual and future risk appetite and strategy taking into account all types of risks. Assist the management body in its supervisory function to oversee the implementation of the institution's risk strategy and corresponding limits set. Oversee the implementation of the strategies for capital and liquidity management as well as for all other relevant risks of an institution (i.e. market, credit, operational and reputational risks). Provide recommendations on necessary adjustments to the risk strategy.
Audit committee	 Among other tasks, this committee should: Monitor the effectiveness of the institution's internal quality control, risk management systems, and, where applicable, its internal audit function. Oversee the establishment of accounting policies by the institution. Monitor the financial reporting process and submit recommendations to ensure its integrity.
Combined committees	CAs may allow institutions that are not considered significant to combine the risk committee with, where established, the audit committee . Where risk and nomination committees are established in non-significant institutions , they may combine the committees. If they do so, those institutions should document the reasons why they have chosen to combine the committees and how the approach achieves the objectives of the committees.

• Institutions should at all times ensure that the members of a combined committee possess, individually and collectively, the necessary **knowledge**, **skills and expertise**.

Governance framework

According to these GL, the management body should ensure a suitable and transparent organisational and operational structure and have a written description of it . In this regard, they should avoid setting up complex structures and should consider the application of mitigation

actions Governance framework (1/2)

- Regarding the organisational framework, the management body should:
 - Ensure that the structure promotes and demonstrates the **effective and prudent management** of an institution.
 - Ensure that the internal control functions are **independent of the business lines** they control, considering the appropriate financial and human resources as powers to effectively perform their role. The reporting lines and the allocation of responsibilities, in particular among key function holders, should be clear, well-defined, coherent, enforceable and documented.
 - Oversee and manage effectively the **risks the institution or the group faces** or the ability of the CA to effectively supervise the institution.
 - Assess whether and how **material changes** to the group's structure (e.g. setting up of new subsidiaries, mergers and acquisitions, etc.) impact the soundness of the institution's organisational framework.
- Regarding the structure, the management body should among others:
 - Fully know and understand the organisational and operational structure (**know-your-structure**) and ensure that it is in line with the business and risk strategy, and risk appetite and covered by its risk management framework.
 - Be responsible for the approval of sound strategies and policies.
- Institutions should **avoid setting up complex and potentially non-transparent structures**, taking into account several aspects (e.g. compliance with international standards on tax transparency anti-money laundering, terrorist financing.; the extent to which the structure serves an obvious economic and lawful purpose, etc.). The management body should ensure that **appropriate mitigation actions are taken** to avoid the risks of the activities within such structures, including that :
 - The institution has in place **adequate policies and procedures** and documented processes for the consideration, compliance, approval and risk management of such activities.
 - Information concerning these activities and risks is **accessible** to the consolidating institution, internal and external auditors and is reported to the management body in its supervisory function and to the CA.
 - The institution periodically assesses the need to maintain such structures.

Organisational framework and structure¹

Detail Governance framework

Further, the GL establishes that the institution's governance policy should be implemented at group level, and that institutions are fully responsible for all outsourced services

Governance framework (2/2)

Organisational framework in a group context

- The consolidating institution (at consolidated or sub-consolidated level) and CAs should ensure that a groupwide written internal governance policy describing arrangements, processes and mechanisms is implemented and complied with by all institutions and other entities within the scope of prudential consolidation (including their subsidiaries not subject to the CRD IV., those established in third countries, and in offshore financial centres).
- A consolidating institution should consider the **interests of all its subsidiaries**, and how strategies and policies contribute to the interest of subsidiaries and the interest of the group as a whole over the long term.

Outsourcing policy

- The management body should **approve** and regularly **review** and **update the outsourcing policy**, considering the impact of outsourcing on an institution's business and the risks it faces (e.g. operational, reputational, concentration risk, etc.). The policy should include the reporting and monitoring arrangements to be implemented.
- An institution **remains fully responsible** for all outsourced services and activities and management decisions arising from them.
- The policy should state that outsourcing arrangements should **not hinder effective on-site or off-site supervision** and should not contravene any supervisory restrictions on services and activities.

Risk culture and business conduct

The GL establishes that institutions should have develop an integrated and institution-wide risk culture developed based on the risk they that the institution face, and that the management body should develop high ethical and professional standards

Risk culture and business conduct (1/2)

Risk culture

- A sound, diligent and consistent risk culture should be a **key element of institutions' effective risk management** and should enable institutions to make sound and informed decisions. Therefore, institutions should develop an **integrated and institution-wide risk culture** (based on, among others, the risks they face).
- Staff of the institution should be fully aware of their responsibilities relating to risk management.
- Thus, business units under the oversight of the management body, should be primarily **responsible for managing risks on a day-to-day basis**, taking into account the institution's risk capacity/appetite.
- A strong risk culture should include at least the followings aspects: i) tone from the top, thus the
 management body should be responsible for setting and communicating the institution's core values and
 expectations, ii) accountability, which means that relevant staff at all levels should know the core values of
 the institution, its risk appetite and risk capacity, iii) effective communication and challenge, and iv)
 incentives to align risk-taking behavior to the institution's risk profile and its long term interest.

Corporate values and Code of conduct

- The management body should develop, adopt, adhere to and **promote high ethical and professional standards** taking into account the specific needs and characteristics of the institution, aimed at enhancing the institution's robust governance arrangements and reducing the risks to which the institution is exposed. In this respect, institution's policies should be gender neutral and avoid any form of discrimination. The management body should have clear and documented policies for how these standards should be met. In particular, these policies should:
 - Remind that activities should be conducted in compliance with **applicable laws** and **corporate values**.
 - Promote risk awareness through a strong risk culture.
 - Provide acceptable and unacceptable behaviors (e.g. misconduct, fraud, money laundering, etc.).
 - Clarify that staff are expected to conduct themselves with honesty and integrity.
 - Ensure that staff are aware of the potential internal and external disciplinary actions.

Risk culture and business conduct

Moreover, institutions should have in place a policy to identify, manage and mitigate actual and potential conflicts of interest at institutional level and for staff. The GL also provide guidance on the internal alert procedures and on the reporting of breaches

Risk culture and business conduct (2/2)

Conflicts of interest

- Conflicts of interest policy at institutional level¹. The management body should be responsible for establishing, approving and overseeing the implementation and maintenance of effective policies to identify, manage and mitigate actual and potential conflicts of interest at institutional level. Institutions' measures to manage or where appropriate mitigate conflicts of interest should be documented and include, inter alia, appropriate segregation of duties, information barriers, etc.
- **Conflicts of interest policy for staff.** The management body should be responsible for mitigating actual and potential conflicts between the interests of the institution and the private interests of staff, including members of the management body which could adversely influence the performance of their duties and responsibilities.
 - A duly **approved policy** should be established and it should cover, among other, certain situations or relationship where conflicts of interests may arise (e.g. economic interests, personal or professional relationships, other employment, etc.). This also includes managing conflicts of interest in the context of granting loans and entering into other transactions
 - This policy should set out procedures (e.g. entrusting conflicting activities or transactions to different persons, preventing staff from having inappropriate influence, etc.) for preventing conflicts of interests.

Internal alert procedures

- Institutions should put in place appropriate procedures that ensure staff can report potential or actual breaches of regulatory requirements (available to all staff within an institution) and that the regulation protection of persons who report breaches of Union law is met.
- To avoid conflicts of interest, reporting of breaches by staff should take place outside regular reporting lines (e.g. through the compliance function, the audit function or an independent internal whistleblowing procedure).
- Institutions should also ensure the protection of personal data concerning both the person who reports the breaches and the natural person who is allegedly responsible for a breach.

Reporting of breaches

Making things happen

MGC

- The **internal alert procedures** should, among others, be documented, ensure confidentiality of information, etc.
- CAs should establish effective and reliable mechanisms (e.g. for the receipt of report on breaches) to encourage institutions' staff to report CAs on potential or actual breaches of regulatory requirements. They may also encourage employees to first try and seek to use their institutions' internal alert procedures.
- A consolidating institution should consider the interests of all its subsidiaries

nagement**Solutions** (2) It should not be necessary that reporting staff has evidence of it, but a level of initial certainty that provides sufficient reason to launch an investigation. © Management Solutions 2021. All rights reserved Page 15

Detail Internal control framework and mechanisms

These GL provide guidance on how internal control framework should be organised and how internal control is implemented

Internal control framework and mechanisms (1/5)

Internal control framework

- Institutions should develop and maintain a **positive culture** towards risk control and compliance within the institution and a **robust and comprehensive internal control framework**.
- Under this framework, **institutions' business lines** should be responsible for managing the risks they incur in conducting their activities and should have controls in place that aim to ensure compliance with internal and external requirements.
- The internal control framework should be adapted on an individual basis to the specificity of its **business**, its **complexity and the associated risks**, taking into account the group context.
- Institutions should implement appropriate processes and procedures that ensure that they comply with their obligations in the context of **combating money laundering and terrorist financing**.
- The internal control framework should cover the **whole organisation**, including the management body's responsibilities and tasks, and the activities of all business lines and internal units, including internal control functions, outsourced activities and distribution channels.
- Among other aspects, the **internal control framework** of an institution should ensure effective and efficient operations, prudent conduct of business, etc.

Implementing an internal control

- The **management body** should be responsible for establishing and monitoring the adequacy and effectiveness of the internal control framework processes and mechanisms, and for overseeing all business lines and internal units, including internal control functions (such as risk management, compliance (including AML/CFT), and internal audit functions).
 - Institutions should establish, maintain and **regularly update adequate written internal control policies**, mechanisms and procedures that should be approved by the management body.
 - They should also **communicate those policies**, **mechanisms and procedures to all staff** and every time material changes have been made. Internal control functions should verify the implementation.

Detail Internal control framework and mechanisms

Institutions should have a risk management framework across all the institution's business lines and internal control functions. The GL include provisions on how this framework should be set

Internal control framework and mechanisms (2/5)

Internal control: risk management

- As part of the overall internal control framework, institutions should have a holistic wide **risk management framework** extending across all its **business lines** and **internal control functions**. This framework should:
 - Encompass **on- and off-balance-sheet risks** and **actual and future risks** that the institution may be exposed to (i.e. financial and non-financial risks¹.
 - Evaluate risks from the bottom up and from the top down, within and across business lines, using consistent terminology and compatible methodologies at consolidated or sub-consolidated level.
 - Include **policies**, **procedures**, **risk limits** and **controls** ensuring adequate, timely and continuous identification, measurement or assessment, monitoring, management, mitigation and reporting of the risks at the business line, institution and consolidated or sub-consolidated levels.
 - Provide specific **guidance** on the **implementation of its strategies** which should establish and maintain internal limits consistent with the institution's risk appetite, capital base and strategic goals.
 - Ensure that whenever breaches of risk limits occur, there is a defined process to escalate and address them with an appropriate follow up.
 - Be subject to **independent internal review** and reassessed regularly against the institution's risk appetite, taking into account information from the RMF and, where established, the risk committee.
 - Develop appropriate methodologies when identifying and measuring risks, including both **forward-looking** (e.g. scenario analysis and stress tests) and **backward-looking tools** (that should assess the actual risk profile and compare it against the institution's risk appetite).
- The determination of the level of risk taken should not only be based on **quantitative information** or model outputs, but should use a **qualitative approach** (including expert judgment and critical analysis).
- The **ultimate responsibility** for risk assessment lies solely **with the institution** which accordingly should evaluate its risks and should not exclusively rely on external assessments (e.g. external credit ratings).
- Effective **risk reporting** (i.e. well defined, documented and duly approved by the management body) involves sound internal consideration and communication of risk strategy and relevant risk data (e.g. exposures and key risk indicators).
- (1) Including credit, market, liquidity, concentration, operational, IT, reputational, legal, conduct, compliance, strategic risks, AML/CTF and other financial crime and ESG risks.

Internal control framework and mechanisms

The GL provide that institutions should adopt a new product approval policy (NPAP) and that the internal control framework should include a risk management function, a compliance function and an internal audit function

Internal control framework and mechanisms (3/5)

Internal control: new products

- Institutions should have in place a well-documented **new product approval policy (NPAP)**, approved by the management body, that addresses the development of new markets, products and services and significant changes to existing ones, as well as exceptional transactions.
- The policy should in addition encompass **material changes** to related processes (e.g. new outsourcing arrangements) and systems (e.g. IT change processes).
- In this regard, a NPAP should: i) cover every consideration before deciding to enter new markets, deal in new products, launch a new service or make significant changes to existing products or services; ii) include the definition of 'new product/market/business/significant changes' to be used in the organisation and the internal functions to be involved in the decision-making process; iii) set out the main issues to be addressed before a decision is made (e.g. regulatory compliance, accounting, pricing models, etc.), iv) identify and assess the ML/TF risk associated with the new product or business practice, and set out the measures to take to mitigate those risks.
- The **RMF** should also be involved in **approving new products** or **significant changes** to existing products, processes and systems and should have a clear overview of the **roll-out of new products**.

Internal control: functions

Heads and independence of the functions

Resources of internal control functions

- The internal control functions should include a **risk management function**, a **compliance function**¹ and an **internal audit** function. The risk management function and compliance function may be combined. The internal audit function should not be combined with another internal control function.
 - Heads of internal control functions should be set out at an adequate hierarchical level with appropriate authority and stature to fulfil his or her responsibilities. They should be **independent** of the business lines or units they control, and should report and be directly accountable to the management body.
 - In order to ensure their independence, several conditions should be followed (e.g. their staff should not perform operational tasks that they are intended to monitor, they should be separately organised, etc.).
 - Internal control functions should have sufficient resources. They should have an adequate number of qualified staff (both at parent level and subsidiary level) and should be qualified on an on- going basis, and should receive training as necessary.

Detail Internal control framework and mechanisms

Regarding these internal control functions, the GL specify that the risk management function should consider the risk policies and the risk management framework of the institution,...

Internal control framework and mechanisms (4/5)

Internal control functions: RMF

Management Solutions

Making things happen

MGC

- Institutions should establish a RMF with **sufficient authority**, **stature**, **resources** to implement risk policies and the risk management framework.
- Accordingly, it should be a **central organisation feature of the institution**¹ and should have **direct access to the management body** in its supervisory function and committees, to all business lines and other internal units that have the potential to generate risk, and to relevant subsidiaries and affiliates.
- Staff within RMF should possess **c**on risk management techniques and procedures and on markets and products and have access to regular training.
- The RMF should be **independent of the business lines and units whose risks it controls** but should not be prevented from interact with them. Interaction between the operational functions and the RMF should facilitate the objective that all the institution's staff bears responsibility for managing risk.
- The RMF should provide relevant independent information, analyses and expert judgment on risk
 exposures, and advice on proposals and risk decisions made by business lines or internal units and
 the management body as to whether they are consistent with the institution's risk appetite and risk
 strategy.
- The RMF may recommend **improvements** to the risk management framework and **corrective measures** to remedy breaches of risk policies, procedures and limits.
- Regarding the RMF's role, it should be actively involved in risk strategy and decisions (e.g. the RMF should provide the management body with all relevant risk-related information to enable it to set the institution's risk appetite level, should assess the robustness and sustainability of the risk strategy and appetite, etc.); in material changes; in identifying, measuring, assessing, managing, monitoring and reporting risks; and in unapproved exposures.
- The **head of the RMF** should be responsible for providing comprehensive and understandable information on risks. When is not justified to appoint a person only dedicated to this function, it **can be combined with the compliance function** or can be performed by another senior person (with no conflict of interest).

) Significant institutions may consider establishing dedicated RMFs for each material business line. However, there should be a central RMF, including a group RMF in the consolidating institution of a group.

Internal control framework and mechanisms

... a compliance function to manage the institution's compliance risk, as well as an internal audit function (IAF) that should assess, among others, the quality of the internal control framework

Internal control framework and mechanisms (5/5)

Internal control functions: compliance

- Institutions should establish a permanent and effective compliance function to manage compliance risk¹ and should appoint a person responsible for this function across the entire institution (the compliance officer or head of compliance).
- The **compliance function** should be independent of the business lines and internal units it controls and have sufficiently authority, stature and resources.
- Staff within the compliance function should possess **sufficient knowledge**, **skills** and **experience** on compliance and procedures and have access to regular training.
- The management body in its supervisory function should **oversee the implementation** of a well-documented compliance policy, which should be **communicated to all staff.**
- Moreover, it should **advise the management body** on laws, rules, regulations and standards the institutions need to comply with and assess the impacts of changes in the regulatory environment.

Internal control functions: internal audit

- Institutions should set up an **independent and effective internal audit function** taking into account the proportionality criteria and appoint a person responsible for this function across the entire institution. In this regard, the **IAF should**:
 - Be **independent** and have sufficiently authority, stature and resources (e.g. monitoring tools and risk analysis methods).
 - Perform an independent review of the compliance of all activities and units of an institution.
 - Assess the **quality of the internal control framework** by taking into account, among others, the appropriateness of the institution's governance framework, whether existing policies and procedures remain adequate and comply with legal requirements and with its risk appetite and strategy, etc.
- The **head of the IAF** should be able to report directly and on his own initiative the management body in its supervisory function of the non-implementation of the corrective measures decided on.
- Internal audit work should be performed in accordance with an **audit plan** that should be drawn up **at least once a year** on the basis of the annual internal control objectives.

Detail Business continuity management

Institutions should have a Business Continuity Management to reduce risk's impacts arising from a disaster or extended interruption

Business continuity management

Business Continuity Management

- Institutions should establish a sound Business Continuity Management to reduce the operational, financial, legal, reputational and other material consequences from a disaster or extended interruption.
- In this regard, they should analyse their exposure to severe **business disruptions** and assess (quantitatively and qualitatively) their **potential impact**, using internal and/or external data and scenario analysis.
- On the basis of the above analysis, an institution should establish **contingency and business continuity plans** and **recovery plans** which should be documented and carefully implemented.
- In addition, a specific independent Business Continuity function part of the RMF, the **Operational Risk Management Function**, should be actively involved for those institutions permitted to use AMA¹.

Principles applied to the internal governance framework

The EBA specifies that institutions should apply the proportionality and transparent principles in order to establish internal governance arrangements in line with the individual risk profile and business model of the institution and to inform and update the relevant staff, respectively

Principles applied to the internal governance framework

Proportionality

- Institutions should take into account their size, internal organization and the nature, scale and complexity of their activities when developing and implementing internal governance arrangements.
- Among others, **institutions** and **CAs should consider** the geographical presence of the institution and the size of the operations in each jurisdiction, the legal form and whether the institution is part of a group, etc.
- According to the proportionality principle:
 - Systemic institutions and more complex institutions and groups should have **more sophisticated** governance arrangements.
 - Small and less complex institutions and groups may implement simpler governance arrangements.

Transparency

- The management body should **inform and update the relevant staff** about the institution's strategies and policies in a clear and consistent way, at least to the level needed to carry out their particular duties (e.g. through written policies, manuals, etc.).
- Where parent undertakings are required by CAs to publish annually a description of their legal structure and governance and organisational structure of the group of institutions, the information should include **all entities** within its group structure, by country.
- The publication should include, among others:
 - An overview of the **internal organization** of the institution and its group structure, including the main reporting lines and responsibilities.
 - · Any material changes compared to the previous publication and respective date thereof.
 - New legal, governance or organizational structures.
 - An overview of material outsourcing of activities, processes and systems.
 - The nature, extent, purpose of close links between **other credit institutions** and other natural or legal persons, including the names and seat.
 - Information on the structure, organization, responsibilities and members of the management body.
 - A list of the committees of the management body in its supervisory function and their composition.

Annex Internal governance policy

Institutions should consider several aspects (e.g. shareholder structures, group structure if applicable, etc.) when developing and documenting the written internal governance policy

1. Shareholder structure	6. Internal control framework	
2. Group structure if applicable (legal and functional structure)	a) description of each function (its organisation resources, stature, authority)	
3. Composition and functioning of the management body	b) description of the strategy and risk management framework
